

SkySpark Engineer

A Fantom Factory eLearning course

Course duration: 2-4 days

Course access: 35 days

Contains:

- 8 learning modules
- 12 demonstration videos
- 150 interactive exercises

Build out your first SkySpark Project with points and rules, as we look into the underlying data structures within this technology stack.

*Ideal for joiners, or new SkySpark customers.
No need to install software or licences.*

Certification is awarded for a real demonstration of knowledge and skills as taught from our bespoke syllabus.

No need to rush your training! Log in to your eLearning account at times to suit you. Your progress is saved as you work through the interactive exercises.

Simply enter a course access code to start your **SkySpark Engineer** training straight away.

SkySpark Engineer

A Summary of our eLearning Syllabus

Module 1

A look at the technologies and data structures in SkySpark.

Module 2

Understand how to apply Project Haystack tagging standards.

Module 3

Use the **Builder** app, to create Project, Site and Equip records.

Module 4

Create and practise **Axon** filter expressions to retrieve Folio data.

Module 5

Understand and use connectors to add and edit point values.

Module 6

A dive into collecting, managing, and viewing historical data.

Module 7

Create and edit the different SkySpark rule types.

Module 8 - Final Assessment

15 interactive questions covering learning from the entire syllabus.

You will feel confident in using **Axon filter expressions** to retrieve data, practising with our unique and interactive **Axon Command Console**.
